

THE AI STUDIO

One prompt. Brand, site, deck, video — shipped.

Every other AI hands you a draft. Blade-x hands you the finished artifact — deployed app, scored video, branded deck — produced end-to-end from a single conversation.

YOU ASK

“Build the brand, landing page and launch video for a sleep tracker called Nocturne.”

- Research the category
- Name + brand kit
- Landing page deployed
- Launch video scored
- Investor deck assembled

TODAY

AI today is ten tabs and a copy-paste habit.

The frontier is here, but it ships as draft fragments — text in one tool, image in another, video somewhere else. The stitching is yours.

Today's output is options. Tomorrow's output is finished work. Blade-x is the bridge.

THE STUDIO

Not a chatbot. A studio that ships.

Blade-x is one canvas across twelve creative disciplines. Workflows chain across them, and the interface adapts to whatever you're building.

One canvas

Every discipline — brand, site, video, deck, app — in a single conversation.

Chained workflows

Outputs feed inputs. Brand kit feeds the site. Site feeds the deck. Deck feeds the video.

Adaptive interface

The UI builds itself around the artifact. No fixed dashboard, no template lock-in.

The signature: Blade mode

Every frontier model + the live web, reconciled into one verified answer in thirty seconds. No competitor ships multi-AI verification.

NOT A CHATBOT

Output is shipped work, not message threads.

NOT A TEMPLATE TOOL

Every artifact is generated, not picked from a library.

NOT A WRAPPER

Multi-AI orchestration is the product, not a feature.

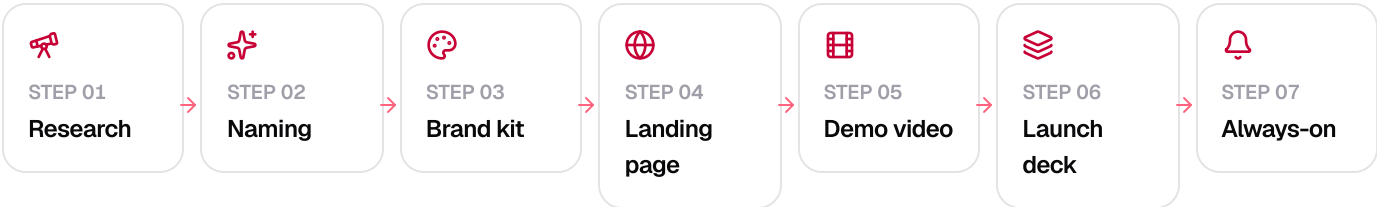

THE CHAIN

The studio doesn't answer. It ships.

A single sentence triggers a seven-stage chain. Each stage feeds the next. The output is a finished launch, not a folder of files.

THE PROMPT

“Launch Nocturne — an AI sleep coach for shift workers.”

CROSS-REFERENCES

Brand kit colors auto-flow into the landing page hero.

ONE CONVERSATION

No handoffs, no template imports, no copy-paste.

VERIFIED END-TO-END

Blade mode checks each stage before the next begins.

RESULT

Launch, shipped

THE DIAL

Six modes. One for every job.

Start in Auto and the studio routes for you. Dial up when stakes rise — Blade verifies, Pro builds, Blade X does both on a loop.

**Quick**

THE CHAT LANE

Streaming answers, fast. Questions, lookups, short writes.

**Auto**

THE DEFAULT

The studio routes between Quick and Pro for you. Zero decisions.

**Pro**

THE ARTIFACT LANE

Ships a finished thing — a page, a deck, a video, a deployed app.

**Blade**

THE VERIFY LANE

Every frontier model + live web, reconciled into one verified answer in under 30s.

**Deep Research**

THE DOSSIER LANE

Long-form, cited research report — a sourced PDF you can ship straight to a partner.

**Blade X**

BLADE + PRO, ON A LOOP

Builds anything — app, video, brand kit, deck — then auto-reviews itself. Guaranteed best.

TOP TIER

WHEN EACH MODE FITS

Quick

- Fact lookup
- Summarize a page
- Quick reply

Blade

- Investor diligence
- Legal-grade claim
- Trust-critical answer

Auto

- Default chat
- Mixed Q&A + work
- Hands-off routing

Deep Research

- Market dossier
- Competitive teardown
- Sourced briefing

Pro

- Ship a deployed app
- Cut a launch video
- Build a deck

Blade X

- Mission-critical build
- Overnight project audit
- Best-possible delivery

TWELVE DISCIPLINES

One conversation runs the whole stack.

Each tile below is a separate product in the market. Blade-x ships them all from a single chat — and they cross-reference each other.

**Web apps**

Sentence → live URL

**Mobile apps**

Native, no Xcode

**Brand kits**

System, not logo

**Image**

Studio visuals on demand

**Video**

Cut, scored, narrated

**Music**

Original, on-brief

**Voice**

Cloned and directed

**Documents**

Long-form PDFs

**Decks**

Investor-grade

**Deep Research**

Cited dossier PDF

**Blade**

Multi-AI verified

**Campaigns**

Drafted and sent

The compounding effect. Twelve siloed products serve twelve workflows. Blade-x threads them through one conversation, so every output becomes the input to the next discipline. Brand feeds web. Web feeds deck. Deck feeds video. Video feeds campaign.

HERO DEEP-DIVE 1 / 2

Brand and Web — from sentence to live URL.

The brand kit isn't a logo file. The site isn't a static export. The two are wired to each other from the first prompt.

🌀 BRAND KIT

A system, not a logo.

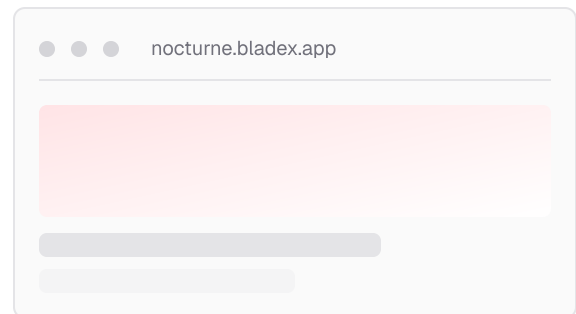

#0F172A #7C3AED #A78BFA #FCD34D #F4F4F5

- ✓ Wordmark + lockups + favicon
- ✓ Color tokens, typography ramp, spacing scale
- ✓ Voice doc + usage guidelines

🌐 WEB APPS

Sentence to live URL.

- ✓ Deployed on a real subdomain, not a preview
- ✓ Next.js + the studio's design tokens
- ✓ Edit by chatting — “swap the hero, tighter copy”

The cross-reference. The brand kit's color tokens flow into the site automatically. Change a brand color in chat — the deployed site rebuilds.

HERO DEEP-DIVE 2 / 2

Video and Deck — finished, not exported.

The video is cut, scored, and narrated. The deck is investor-grade and pulls from the same source as the site.

VIDEO

Cut, scored, narrated.

- ✓ Image-to-video — start from your brand visuals
- ✓ Original score, on-brand, no licensing
- ✓ Voice-over picked from cloned or stock library

DECKS

Investor-grade slides.

- ✓ 16:9 or letter portrait, brand-true
- ✓ Pulls metrics, copy, and visuals from the site
- ✓ Edit by chatting — “swap slide 3 for a TAM chart”

The compounding. Every artifact made in the studio becomes a source for the next one. Iteration is conversation, not export-import.

THE MOAT

Every frontier model. One verified answer. 30 seconds.

Blade fans your prompt across every frontier model plus the live web, then reconciles them into a single trusted answer. No competitor ships this.

**< 30s**

END-TO-END

5+

MODELS FANNED

0

VENDOR LOCK-IN

ChatGPT gives you one model. Claude gives you one model. Gemini gives you one model. Blade gives you all of them — cross-checked against the live web and reconciled into a single verified answer.

WHY THIS IS THE MOAT

Single-vendor AI is a bet

Pick one model and you inherit its blind spots, its outages, its policy shifts.

Blade diversifies it

Five frontier models + live web — agreement is the signal, disagreement is the flag.

Only we ship it

No other AI product fans across vendors and reconciles. It is our wedge.

WHY WE WIN · HEAD TO HEAD

What the studio ships — vs the rest.

Default UI, paying tier. No third-party plugins. Assessed against current public documentation, 2026.

THE TAKEAWAY

Only Blade-x verifies

Blade mode and Blade X aren't on any competitor roadmap — they only run here.

Only Blade-x ships

Live URLs, native mobile builds, branded decks, scored videos — finished work, not drafts to assemble.

One bill, one chat

Replaces seven+ subscriptions — no tab-switching, no copy-paste, no model lock-in.

AGENTS · ALWAYS-ON WORKERS

Spawn an agent. Give it a job. It runs.

Agents are workers you assign to a standing responsibility. Read every inbox at 6 a.m. and brief you. Watch a hashtag. Reply on WhatsApp in your tone. The studio ships the artifact; agents keep the operation moving.

**Inbox triage**

Reads every email overnight. Ranks what to reply to, what to ignore, what to escalate.

**Outbound reach**

Sends email, WhatsApp, Telegram, Discord on your behalf. Drafts pass your tone check before they leave.

**Social watch**

Listens to Instagram feeds, hashtags, mentions. Reports the moves, dips, and reply-worthy moments.

**News brief**

Tracks the topics that matter to you. Filters the noise. Surfaces the three stories worth your attention.

**Always-on watch**

Monitors anything with an API or a URL. Pings you when something changes, ships, or breaks.

**Custom agent**

Describe the job in chat. The studio assembles tools, schedules runs, and reports back on the cadence you set.

☀️ DAILY PULSE · THE MORNING BRIEF

One brief. Every morning. Tailored to you.

Inbox triage, news that touches your work, social signal, calendar conflicts, project diffs — synthesized into a single sunrise brief. Read it in two minutes. Reply or dispatch with one tap. Blade verifies anything you flag as high stakes.

DYNAMIC DASHBOARD · THE CANVAS BUILDS ITSELF

Tell the studio what you want to see. The dashboard rearranges itself.

Static dashboards age the day they ship. Blade-x renders your canvas on the fly — tables, charts, kanbans, folders, custom widgets — whatever fits the question you just asked. Say it in chat; the layout follows.

Custom views, on demand

“Show me yesterday’s leads grouped by source.” A table appears. “Now as a kanban by stage.” It reflows. No menus.

Stats you actually use

Pin the numbers that matter to today. Drop the ones that don’t. The studio remembers, and proposes new ones as your work shifts.

Project shelves

Every brand kit, deck, video, and deployed app on one canvas. Open any artifact in the same chat that built it.

Editable in plain English

“Move the inbox to the top. Add a chart of weekly shipped artifacts. Hide the calendar.” Done — no settings page.

One canvas. One conversation. Your layout.

The same chat that ships brand kits and decks rearranges the surface they live on. Your dashboard is no longer a product the team designed for everyone — it’s a product the studio designs for you, this week.

RUN LONG · EMAIL-ON-COMPLETE

Start a 30-minute job. Close the tab. Get the email.

Long generations — a working web app, a deep-research report, a scored music video — run unattended on our side. When the artifact ships, you get an email with the link. Interface can glitch, tabs can close, sleep can happen. The email always lands.

**WHAT TESTERS SHIPPED**

“Build me a functional crypto wallet web app.” Delivered — deployed URL, working flows, in the inbox an hour later.

**WHAT IT COOKS**

Multi-page reports, full sites, decks, scored videos, brand kits — anything that takes more than a single render.

**HOW YOU GET IT**

One email per finished job. Subject line tells you what shipped. One click opens the artifact, live.

**WHY THIS MATTERS**

Heavy work used to mean babysitting a tab.

With email-on-complete you queue the job, walk away, and live your day. We watch the run, retry on flakes, verify the output, and put the link in your inbox. Long-form is finally unattended.

ALWAYS-ON

Your studio keeps working while you sleep.

Wake up to drafts, queued work, and a morning brief. You decide which channels wake you, and when.

**TONIGHT**

Queue research, drafts, image batches, video renders before bed.

**OVERNIGHT**

The studio runs, iterates, and reconciles — Blade verifies the hot ones.

**MORNING**

A single brief: what shipped, what needs your eyes, what to send.

One prompt. One studio. Shipped.

Live today at **bladex.ai**. Bring a project. Watch it ship inside the conversation.
